Keep a learner learning.

A privacy-safe path from an overdue school obligation to verified support, settlement and proof.

Kamwanga Raheem · Hacktoberfest Hack Day Wakiso

THE PROBLEM

A fee balance can become a learning interruption.

Schools can see who owes—but the help arrives late, informally and without a trusted evidence trail.

30%

of secondary learners drop out before completing school

Uganda · UNICEF / MoES, 2024

1 **The signal exists**

Bursars already hold balances, requirements and payment history.

2 **The response is fragmented**

Calls, paper consent, public appeals and manual confirmations do not connect.

3 **Trust is expensive**

Donors cannot easily prove that money reached the intended school obligation.

WHAT HAPPENS TODAY

Good intentions move through a broken chain.

Every hand-off creates delay, uncertainty or unnecessary exposure.

01

Arrears list

A bursar spots a growing balance.

02

Private call

A guardian explains a difficult situation.

03

Public appeal

Sensitive details may be shared to prove need.

04

Unlinked payment

A transfer is hard to reconcile to one obligation.

05

No shared proof

School, guardian and donor hold different records.

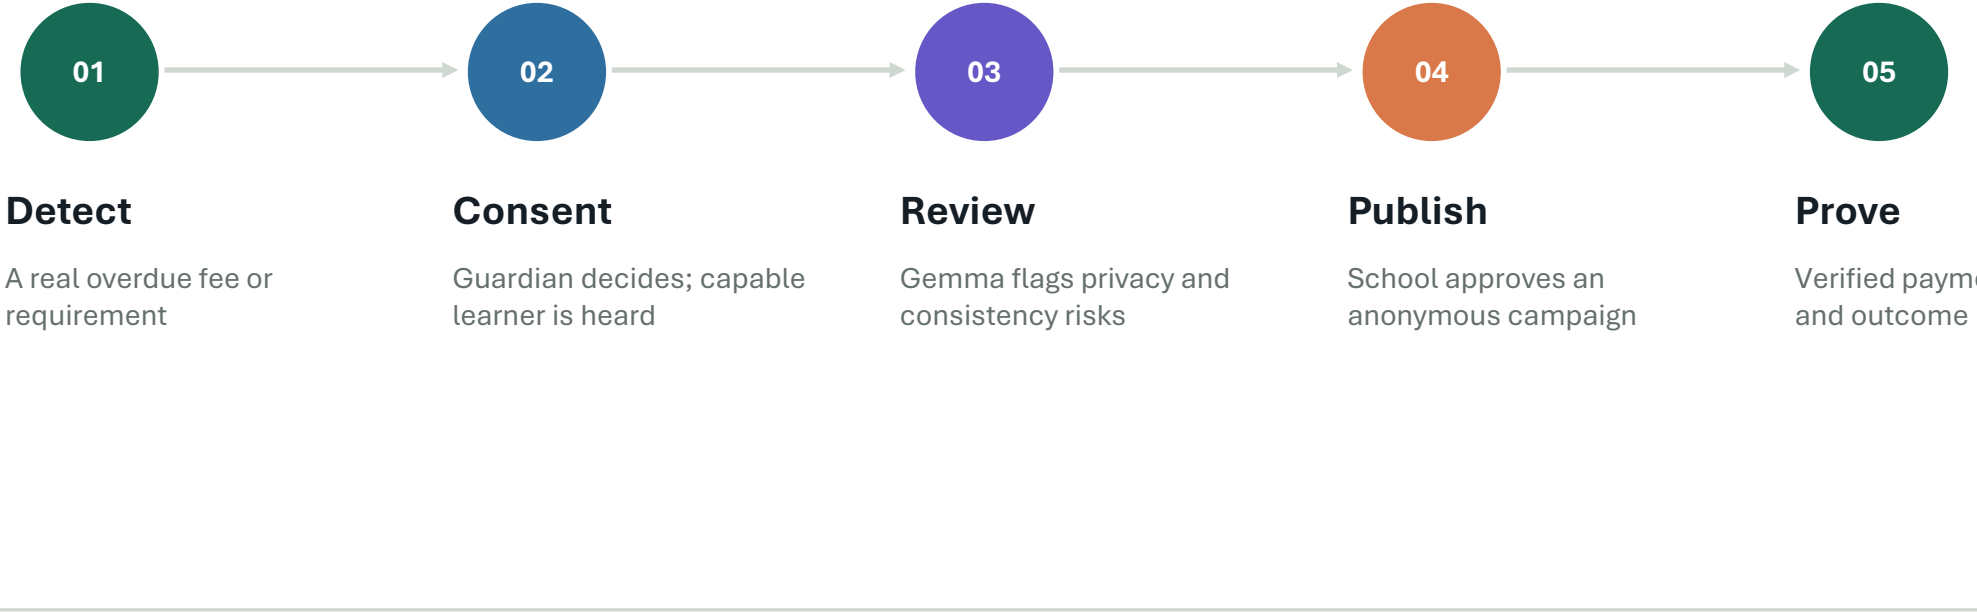

The opportunity

Turn the school ledger into a controlled support workflow—without turning the child into public content.

THE SOLUTION

Support a verified obligation—not an exposed child.

HarambeeOne joins the school ledger, guardian consent, privacy-safe storytelling and donor proof in one accountable flow.

PENDING ≠ FUNDED

Only verified settlement advances the campaign and learner account.

ONE TRUTH, THREE VIEWS

Each person sees only what they need to act.

Role-specific workspaces reduce friction while preserving the same verified record.

School

Bursar / owner

- Finds arrears-derived candidates
- Invites the verified guardian
- Reviews, publishes and settles
- Issues receipt and outcome proof

Guardian

Consent holder

- Receives a private invitation
- Chooses each consent scope
- Adds only necessary context
- Sees payment and campaign progress

Donor

Supporter

- Browses anonymous verified needs
- Pays the school-controlled channel
- Tracks pending vs verified support
- Receives the official school receipt

MEANINGFUL USE OF GEMMA 4

AI is the safety and clarity layer—not the decision-maker.

Gemma works on minimized, pseudonymous facts; a human remains responsible for every approval.

IN THE WORKING REVIEW FLOW

Text + redacted images

- Detects identifying details
- Checks conflicting amounts and claims
- Finds missing evidence or unclear wording
- Returns structured flags—not a verdict

Human approval required

Why this matters

1. **Less exposure**
   Sensitive content is caught before publication.

2. **Better campaigns**
   Guardians and schools get clear, respectful language.

3. **More confidence**
   Donors can ask questions against verified campaign facts.

NEXT

Guardian drafting + donor support assistants, grounded in verified records.

Model integration: Gemma 4 through the Gemini API · ai.google.dev/gemma/docs/core/gemma_on_gemini_api

TRUST BY DESIGN

Transparency does not require public identity.

The donor can verify the money and outcome while the child remains protected.

Private by default

No learner name, photo, exact class or guardian contact on the public portal.

School-controlled money

Destination is the school's bank, mobile-money or SchoolPay channel—never a guardian wallet.

Consent with control

Separate choices for publication, AI review and cross-border processing; withdrawal remains possible.

Verifiable accounting

Pending pledges are separate; settlement posts to the learner ledger exactly once.

Child-centred

The capable learner's view is recorded alongside guardian authority.

Proof after payment

The donor receives a school receipt and redacted continuity update.

Safeguards informed by Uganda Data Protection and Privacy Act 2019, Regulations 2021 and Children Act; deployment requires school policy and legal review.

WORKING PROTOTYPE

The accountable path already runs end to end.

This is more than a concept deck: the financial core and privacy boundary are implemented and tested.

01 Live obligation

Campaign target is checked against a fee or payable requirement.

02 Consent record

Guardian scope and learner assent state are preserved.

03 Private review

Gemma findings remain staff-facing until approved.

04 Public campaign

Only anonymous, reviewed content is published.

05 Verified settlement

Payment, allocation, ledger credit and receipt post atomically.

06 Outcome evidence

Donors receive a redacted update and traceable receipt.

48 backend tests

36 web routes built

✓ tenant isolation + RLS verified

MIT open source

BUILT FOR TRUST AND INTEGRATION

A clear public/private boundary around one financial truth.

Enterprise-ready interfaces let schools connect payment providers and other systems without duplicating records.

PILOT TO SCALE

Our wedge is the bursar’s real arrears workflow—already where the need becomes visible.

01 Pilot

1–3 schools
One term
Verified school obligations

02 Measure

Time to support
Verified settlement rate
Learner continuity

03 Connect

SchoolPay
Banks + mobile money
NGO programmes

Why it fits this hackathon

Focused

A specific community problem with a real user: the bursar.

Multimodal

Gemma reviews text and redacted evidence images.

Open

Original MIT-licensed project with reproducible architecture.

A balance should not end a learner's story.

Help us pilot the accountable path from school arrears to verified support and continued learning.

Pilot schools

Bursars ready to test one term

Payment partners

SchoolPay, bank and mobile-money rails

Safeguarding partners

Legal, child-protection and programme expertise

Keep a learner learning.
